

MAKE THIS APPLE MUSIC STYLE ANIMATION IN CLAUDE

BY ARYAN UPPAL

A step-by-step workflow for creating a polished Apple Music-style motion graphic using Claude Design, a reference video and supplied album artwork.

CLAUDE DESIGN

OPUS 5.5

PROJECT

1440 × 1080 • 4.22 seconds • 60 FPS preferred

30 FPS fallback with smooth interpolation and motion blur.

01 WAVY

02 WINNING SPEECH

03 REAL BADMAN

01 THE WORKFLOW

OPEN CLAUDE DESIGN Open Claude Design first. Select Claude Opus 5.5 and set the thinking level to Medium.

UPLOAD REFERENCES Upload the reference video first, then the three supplied artworks in this exact order: WAVY → WINNING SPEECH → REAL BADMAN.

PASTE THE PROMPT Copy and paste the master prompt included in this PDF. It tells Claude exactly how to reproduce the reference's visual language.

BUILD THE ANIMATION Let Claude build the Apple Music-style player, artwork slides, UI movement, perspective, typography and final lyric transformation.

REFINE THE RESULT Use targeted follow-up instructions for timing, easing, spacing, perspective, motion blur or lyric reveal. Keep the reference as the visual authority.

STEP-BY-STEP

FROM REFERENCES → FINAL ANIMATION

01 START THE PROJECT

Open Claude Design and select Claude Opus 5.5 at Medium. Start with the goal of reproducing the supplied reference's Apple Music-style motion system using only the supplied assets.

02 FEED CLAUDE THE REFERENCES

Upload the reference video, then WAVY, WINNING SPEECH and the NEW REAL BADMAN poster. Keep the order explicit. Do not let Claude replace, redraw or hallucinate artwork.

03 PASTE THE MASTER PROMPT

Use the copy-paste prompt in this PDF. It locks resolution, duration, song order, lyric text, transition language, UI hierarchy, motion rules, perspective, blur and accuracy checks.

04 BUILD THE TIMELINE

WAVY opens → slides to WINNING SPEECH → slides to REAL BADMAN → REAL BADMAN morphs into the lyric player. The full animation is 4.22 seconds.

05 REFINE, DON'T REDESIGN

If something feels wrong, ask for targeted fixes: timing, easing, spacing, perspective, motion blur or lyric reveal. Keep the reference as the visual authority.

06 TIMELINE

00:00 → 00:18

WAVY
Opening player state; no over-animation.

00:18 → 01:13

WAVY → WINNING SPEECH
Physical horizontal slide; easing + controlled blur.

01:13 → 02:18

WINNING SPEECH → REAL BADMAN
Same transition language; establish the supplied poster.

02:18 → 04:22

REAL BADMAN → LYRICS
Smooth UI/shape morph; reveal the lyric progressively.

07 PROMPT BLUEPRINT

- **ROLE:** expert motion-graphics designer / creative developer.
- **REFERENCE:** study timing, UI, typography, sliding artwork, perspective, blur and easing.
- **OUTPUT:** 1440×1080, 4.22s, 60 FPS preferred.
- **ASSETS:** only supplied images; never redraw or hallucinate artwork.
- **SEQUENCE:** WAVY → WINNING SPEECH → REAL BADMAN.
- **FINAL STATE:** exact lyric "Baby They Know me, bade loki they owe me".
- **PRIORITY:** reference > supplied artwork > visual timing > creative interpretation.

08 FINAL CHECK

Created by Aryan Uppal • Claude Design + Opus 5.5 (Medium)

Use the reference video and supplied artwork as your visual source material.
□ 1440×1080 □ 4.22s □ WAVY first
□ Smooth slides □ Morph to lyrics □ Exact lyric

□ REAL BADMAN poster □ Apple Music UI

□ Visual timing □ No random effects

You are an expert motion graphics designer and creative developer specializing in premium music-video typography, Apple Music-style UI animation, kinetic typography, image transitions, and highly polished editorial motion design.

I need you to create a 4.22-second animation in 1440 × 1080 resolution.

IMPORTANT: I am providing a reference video. The reference video is the PRIMARY visual reference for the animation language. Study its timing, Apple Music player layout, typography treatment, sliding album artwork, volume sliders, progress bar, UI elements, perspective, motion blur, easing, text animation, and transitions.

DO NOT loosely interpret the reference.

I want the animation to closely reproduce the same visual language and motion behavior shown in the reference video, while replacing its content with the Karan Aujla artwork and song information I provide below.

1. OUTPUT

Resolution:
1440 × 1080

Aspect ratio:
4:3

Total duration:
4.22 seconds

Frame rate:
Prefer 60 FPS for extremely smooth motion if supported.
If the implementation requires 30 FPS, maintain smooth interpolation and motion blur.

The final result must feel:

- extremely smooth
- premium
- cinematic
- editorial
- polished
- Apple Music-inspired
- precise
- rhythmically synchronized to the visual timing of the reference
- free from jerky movement
- free from unnecessary effects

Every movement should have intentional easing.

2. PRIMARY REFERENCE

The attached reference video is the most important visual reference.

- Use it to reproduce:
- Apple Music player appearance
 - album-art placement
 - album-art sliding behavior
 - horizontal movement
 - UI hierarchy
 - progress bar
 - volume sliders
 - play/pause controls
 - typography
 - text placement
 - text scale
 - perspective
 - motion blur
 - depth

- image transitions
- kinetic typography
- timing
- easing
- visual rhythm
- transitions between player states

The goal is NOT to create a generic music-player animation.

The goal is to recreate the same type of motion-design system shown in the reference video, but with my supplied Karan Aujla assets.

Do not add random UI elements that are not present in the reference.
Do not redesign the interface unnecessarily.

=====

3. ASSET RULE — VERY IMPORTANT

=====

ONLY use the supplied images.

Do not generate replacement artwork.
Do not hallucinate album covers.
Do not redraw album covers.
Do not recreate logos.
Do not invent typography from the album artwork.
Do not change the artwork design.
Do not modify the artist's face or artwork.

You may only:

- scale
- crop where necessary
- position
- rotate
- perspective-transform
- mask
- blur
- animate
- transition
- morph
- use as a texture/layer

The actual artwork itself must remain unchanged.

=====

4. SONG / ARTWORK ORDER

=====

The sequence is EXACTLY:

1. WAVY

Artist: Karan Aujla

2. WINNING SPEECH

Artist: Karan Aujla

3. REAL BADMAN

Artist: Karan Aujla

The sequence MUST NOT change.

=====

5. ARTWORK MAPPING

=====

IMAGE 1:
WAVY album artwork.

Song title:
WAVY

Artist:
Karan Aujla

This is the STARTING artwork.

IMAGE 2:
WINNING SPEECH album artwork.

Song title:
WINNING SPEECH

Artist:
Karan Aujla

This is the SECOND artwork.

IMAGE 3:
REAL BADMAN album artwork.

Song title:
REAL BADMAN

Artist:
Karan Aujla

CRITICAL:

Use the NEWLY UPLOADED ACTUAL REAL BADMAN POSTER as the REAL BADMAN artwork.

Ignore any previous REAL BADMAN artwork or earlier reference image.

DO NOT use the AUJLA SZN illustrated car artwork as the Real Badman cover.

The newly supplied REAL BADMAN image is the authoritative asset.

Do not redesign it.
Do not reinterpret it.
Do not substitute another Karan Aujla artwork.
Do not generate a new Real Badman poster.
Use the supplied Real Badman poster exactly as provided.

=====

6. TIMELINE

=====

TOTAL DURATION:
00:00:00:00 → 00:00:04:22

SECTION 1 – WAVY

TIME:
00:00:00:00 → approximately 00:00:00:18

Start with the Apple Music-style player.

The first visible artwork is:
WAVY
Karan Aujla

The player should already feel like it is moving naturally, rather than appearing abruptly.

Use the same visual construction and perspective as the reference video.

The WAVY artwork should be clearly readable.

The Apple Music interface elements should be visible according to the reference.

Do not overanimate this opening.

SECTION 2 – WAVY → WINNING SPEECH

TIME:
approximately 00:00:00:18 → 00:00:01:13

Transition:

WAVY
→
WINNING SPEECH

This transition is extremely important.

Recreate the same type of sliding album/player transition shown in the reference.

The transition should feel like the music player is physically sliding horizontally.

Use:
- smooth interpolation
- controlled motion blur
- subtle perspective
- proper easing
- no harsh linear movement

The outgoing WAVY artwork should move naturally out of frame while WINNING SPEECH enters.

The UI should remain coherent during the transition.

Do not simply crossfade the two album covers.

It MUST feel like a physical Apple Music player sliding between songs.

SECTION 3 – WINNING SPEECH → REAL BADMAN

TIME:
approximately 00:00:01:13 → 00:00:02:18

Transition:

WINNING SPEECH
→
REAL BADMAN

Use the SAME transition language as the previous slide.

Do not introduce a new transition style.

Maintain visual continuity.

The REAL BADMAN artwork must enter using the newly uploaded REAL BADMAN poster.

DO NOT use the previous Real Badman reference.
DO NOT use the AUJLA SZN artwork.
ONLY use the newly supplied REAL BADMAN poster.

By:
00:00:02:18

the REAL BADMAN player/artwork must be fully established.

=====

7. REAL BADMAN → LYRIC PLAYER TRANSFORMATION

=====

TIME:
00:00:02:18 → 00:00:04:22

This is the most important transition in the animation.

At 00:00:02:18, the REAL BADMAN Apple Music artwork/player should begin transforming into the Apple Music lyrics/player state.

Do NOT simply cut from the artwork to lyrics.

The transition must be visually connected.

Use a smooth shape/morph transformation.

The existing Apple Music player geometry should transform into the lyric interface.

Possible motion language:

- artwork scales or shifts
- player geometry stretches
- masks expand
- UI elements rearrange
- typography emerges from existing geometry
- artwork compresses or becomes a background element
- lyric text reveals through a smooth mask
- interface elements morph rather than disappear instantly

Everything must feel like ONE continuous animation.

Avoid flashy transitions.
Avoid glitch effects.
Avoid random particles.
Avoid excessive zooms.
Avoid unnecessary distortion.

The transformation should feel premium and intentional.

8. LYRICS

The lyric content for the final section is:

"Baby They Know me, bade loki they owe me"

Use EXACTLY this text.

Do not change capitalization.
Do not correct the spelling.
Do not translate it.
Do not add additional lyrics.
Do not add quotation marks in the final animation.

The lyric typography should follow the visual language of the reference video.

The text should feel integrated into the Apple Music player rather than appearing as generic subtitles.

9. LYRIC ANIMATION

The lyric section runs:

00:00:02:18 → 00:00:04:22

Use the visual rhythm and timing of the supplied reference video to guide the lyric reveal.

Do NOT make the entire lyric appear instantly.

Use a clean Apple Music-style lyric reveal.

Possible behavior:
- upcoming words/line appear subtly
- active lyric becomes visually emphasized
- text moves vertically if appropriate
- opacity and position transitions remain smooth
- typography remains highly readable

10. APPLE MUSIC UI

The Apple Music interface is a major part of the reference and must NOT be treated as optional.

Recreate the visual components visible in the reference, including where appropriate:

- album artwork
- song title
- artist name
- progress line
- progress indicator
- volume slider
- playback controls
- player geometry
- interface spacing
- typography
- subtle shadows
- UI hierarchy

The volume slider and progress elements should animate smoothly when the reference shows movement.

Do not add modern UI elements that aren't present in the reference.
Do not make it look like a random Spotify interface.

This should clearly read as the Apple Music-style visual language shown in the supplied reference.

11. TYPOGRAPHY

Typography should be clean, modern, bold and highly legible.

Use a font that closely resembles Apple's modern system typography if the exact font is unavailable.

Prioritize:

- clean sans serif
- strong weight hierarchy
- precise spacing
- proper kerning
- smooth anti-aliasing
- consistent alignment

Do not use decorative fonts.
Do not use random display fonts.

Album titles and artist information should maintain the hierarchy shown in the reference.

Lyrics should have a stronger visual presence.

12. MOTION DESIGN

Motion must be extremely smooth.

Use professional motion-design principles:

- Ease In/Out
- Bezier interpolation
- controlled acceleration
- controlled deceleration
- subtle overshoot only where appropriate
- motion blur during fast movement
- no abrupt stopping
- no linear robotic movement

Avoid:

- jitter
- stuttering
- frame skipping
- excessive bounce
- excessive elastic animation
- random camera movement
- aggressive zooms
- glitch transitions
- unnecessary particle effects
- excessive chromatic aberration

The motion should feel expensive and professionally designed.

13. MOTION BLUR

Use motion blur primarily during:

- album artwork slides
- UI movement
- fast text movement
- perspective transitions
- morph transition

Motion blur should enhance speed without destroying readability.

Do not blur the artwork excessively.
Do not use permanent blur.

14. PERSPECTIVE / DEPTH

The reference has a dimensional, slightly photographic interface feel.

Reproduce that feeling with:

- subtle perspective
- controlled scale
- layered UI
- depth separation
- slight rotation where appropriate
- realistic spatial movement

However, do NOT turn this into a 3D gimmick.

The perspective should remain subtle and elegant.

15. VISUAL HIERARCHY

At every moment, the viewer should immediately understand:

1. Which song is playing
2. Which artwork is being shown
3. Where the Apple Music player is
4. What lyric is currently being displayed

Do not clutter the frame.
Keep the composition controlled.
The artwork should remain the visual anchor.

=====

16. TRANSITION QUALITY

=====

The transitions between:

WAVY

→ WINNING SPEECH

→ REAL BADMAN

→ LYRICS

must feel like one continuous piece.

Do not make each section look like a separate animation.

Maintain:

- consistent perspective
- consistent UI
- consistent typography
- consistent motion blur
- consistent easing
- consistent visual scale

=====

17. IMPORTANT ACCURACY RULES

=====

Do not hallucinate any artwork.
Do not invent album names.
Do not invent artist names.
Do not alter Karan Aujla's name.

Use these exact song names:

WAVY

WINNING SPEECH

REAL BADMAN

Use this exact artist name:

Karan Aujla

Use this exact lyric:

Baby They Know me, bade loki they owe me

The REAL BADMAN artwork MUST be the newly uploaded actual poster.

=====

18. FINAL QUALITY TARGET

=====

The final animation should feel like a professionally produced music visualizer / editorial music graphic.

Think:

Apple Music UI
+
high-end kinetic typography
+
album artwork transitions
+
cinematic editorial motion design
+
precise visual timing

NOT:

generic slideshow
generic lyric video
basic Premiere transition
basic CSS animation
random AI motion
glitch edit
template animation

Every frame should look intentional.

=====

19. IMPLEMENTATION PRIORITY

=====

If there is a conflict between creative interpretation and the reference video:

PRIORITIZE THE REFERENCE VIDEO.

If there is a conflict between generated artwork and supplied artwork:

PRIORITIZE THE SUPPLIED ARTWORK.

If there is a conflict between guessed timing and the reference:

PRIORITIZE THE REFERENCE VIDEO.

If there is a conflict between an earlier REAL BADMAN asset and the newly supplied REAL BADMAN poster:

PRIORITIZE THE NEWLY SUPPLIED REAL BADMAN POSTER.

=====

20. FINAL CHECKLIST

=====

Before considering the animation complete, verify:

```
[ ] Resolution is exactly 1440 × 1080
[ ] Total duration is exactly 4.22 seconds
[ ] WAVY is the opening song
[ ] WAVY artwork is used first
[ ] WINNING SPEECH artwork is used second
[ ] REAL BADMAN artwork is used third
[ ] The NEWLY SUPPLIED REAL BADMAN POSTER is used
[ ] No previous Real Badman artwork is used
[ ] Artist is written exactly as "Karan Aujla"
[ ] Album/song names are spelled correctly
[ ] Apple Music-style player is present
[ ] Volume slider is present where appropriate
[ ] Progress bar is present
[ ] Player controls follow the reference
[ ] WAVY → WINNING SPEECH uses a smooth slide
[ ] WINNING SPEECH → REAL BADMAN uses the same smooth slide language
[ ] REAL BADMAN → lyrics is a smooth morph/shape transformation
[ ] Lyrics are exactly:
"Baby They Know me, bade loki they owe me"
[ ] No random text is generated
[ ] No artwork is hallucinated
[ ] No unnecessary effects are added
[ ] Motion is smooth
[ ] No jerky animation
[ ] No harsh linear movement
[ ] Motion blur is controlled
[ ] Typography remains readable
[ ] Final animation feels like one cohesive piece
```

=====

FINAL CREATIVE DIRECTION

=====

Study the supplied reference video carefully before implementing anything.

Recreate its animation language as closely as possible.

Do not make a generic interpretation.

The goal is a highly accurate Apple Music-style motion graphic where the viewer feels that the music player itself is physically moving and transforming.

The album artwork, Apple Music UI, typography, lyric animation and transitions should all belong to the same visual system.

Make the animation smooth enough that individual transitions feel almost fluid rather than like separate cuts.

Use the supplied artwork exactly.

Especially remember:

THE NEWLY SUPPLIED REAL BADMAN POSTER IS THE CORRECT REAL BADMAN ARTWORK.

Do not substitute any previous artwork.

Deliver the final animation at 1440 × 1080 with the complete 4.22-second timeline.
